Support :- 898 383 4813

A warehouse is a structure that, coupled with storage racks, handling tools, staff, and management resources, enables us to regulate the disparities between the flows of items coming in (from suppliers, production facilities, etc.) and leaving out (from those same places) (goods being sent to production, sales, etc.).

• Inward And Outward Entries

The warehouse management provides a straightforward and user-friendly module. You can add new entries for inward data in specific format. Inward entries contains detail information about inbound items with their detailed quantity and price. Similarly in outbound entry it contain detail information about item and agent. By using warehouse it is easy to handle in which you just enter inward number it gives entire details automatically.

• Cash Receipt With Report

Based on previous data gathered. Cash receipt used to provide receipt of outward entries. Warehouse gives you readymade work. In cash receipt when you enter outward number it gives the entire details. In report provides all functionality like update, delete and print the report with each element search option.

• Fumigation And Report

Fumigation are employed to control insects and diseases. In warehouse it shows structured godown and lot plotting with their fumigation completed date. Also provides the detailed fumigation report with their charges.

• Reporting and Analysis

Reports show us our overall level of productivity. Warehouse offers a variety of reports. It keeps track of each inward, outward, and stock reports in date wise. Likewise, keep up with your party wise, agent wise, and item wise reports. The fumigation report shows us details about fumigation.
